Summary

Motivated Computer Engineer with **2+ years of front-end development experience** and **1+ years of back-end experience**, specializing in creating responsive and user-focused web applications. Experienced in building interactive interfaces and contributing to innovative projects. Seeking opportunities to apply my skills in a dynamic environment.

Skills

Programming: Javascript, TypeScript, React.js, Next.js, Vite, Electron, Python, .NET
Experienced With: Firebase, MongoDB, SQL, Docker, Cassandra, Kafka, Azure Services
Languages: English, Turkish, Albanian

Experience

Front-End Developer

Remote

Aimly

September 2024 - Present

- Designed an interactive game-based learning UI that improved student learning efficiency, with 90% of users reporting a more engaging experience.
- Developed a custom JSON editor tool for page administrators, simplifying question and content management and reducing editing time by 40%.
- Designed and implemented the main Aimly.ai website, enhancing user experience and increasing visitor engagement by 25%.
- Leveraged React and TailwindCSS for front-end development, creating dynamic, responsive user interfaces.

CTRL+ Future Program Trainee

Turkey

Koç Holding, Microsoft, Patika.dev, Elev8

15/07/2023 - 13/10/2023

- Successfully completed the CTRL+ Future Program, focusing on technical and professional development in collaboration with leading organizations like Koç Holding, Microsoft, and Patika.dev.
- Designed and developed a fully functional website named TalentBay, showcasing talent profiles and streamlining talent discovery processes.
- Acquired advanced skills in .NET development, building scalable and efficient applications.

Projects

Real-Time Environmental Cargo Tracking using IoT

[Github Repo](#) 

- Graduation project focused on real-life IoT sensor data
- Used Apache Kafka Producer and Consumer to track, store, and display data
- Technologies used: HTML, CSS, JavaScript, Python, MongoDB, Apache Cassandra, Kafka
- Website allows users to track cargo's environmental conditions (temperature, humidity, acceleration, location) in real-time
- Program alerts users if predetermined changes occur during the cargo process
- Achieved success over existing solutions by 45% due to advanced data compression techniques used during transmission

Client and Invoice Management System for Difesa Curtain Store

- Developed a desktop application using Electron and Vite for Difesa Curtain Store
- The system automates curtain size calculations and invoice generation, significantly reducing manual effort
- Features include client management and advanced invoice generation, reducing processing time by up to 80%

- Integrated analytics system to track client behavior, helping the store make data-driven decisions
- Technologies used: Electron, Vite, JavaScript, Node.js, HTML, CSS
- Reduced errors in invoice generation by 30% through automation, improving accuracy and speed
- Streamlined store operations, enhancing overall efficiency and reducing manual workload by 90%
- Enabled faster client onboarding and invoicing, leading to a 50% improvement in customer satisfaction

TalentBay

[Github Repo](#) 

- Led the development of TalentBay, an online learning platform
- Integrated frontend and backend skills
- Aimed to provide hands-on experience in building a user-friendly learning system
- Technologies used: HTML, CSS, JavaScript, ASP.NET, C#, Microsoft SQL Server
- Completed under the CTRL+ Future program
- Successfully demonstrated practical application of complex web development skills

KEP Steel Website Project

[Github Repo](#) 

- Designed and coded website for KEP Steel company.
- Tools used: Figma, React.js, Next.js, HTML, TailwindCSS, GSAP

Education

Kocaeli University

09/10/2018 – 10/06/2024

BS in Computer Engineering

- GPA: 3.2/4.0
- **Thesis:** Real-Time Environmental Cargo Tracking using IoT
